E - Problem E

Source file name: `sort.cpp`
Time limit: 1 second

Given alphabet A and a list of words, sort the list according to the lexicographic order induced by A.

Input

The first line of input contains t, the number of tests.

Each test begins with a line with alphabet A, which consists of lowercase letters arbitrary chosen from the Latin alphabet. The next line contains an integer $n < 100000$ - the number of words. The subsequent n contain one word each, which is not longer than 1000 letters. Additionally, you can assume that the total number of letters in all words of each test does not exceed $4 \cdot 10^6$.

There is an empty line after each test.

The input must be read from standard input.

Output

For each test output the sorted list of words in successive lines.

The output must be written to standard output.

Sample Input	**Sample Output**
2 re 3 ere rer re balujemy 5 bel luba lej bal leje	re rer ere bal bel luba lej leje
